Denmark's National Strategy for Open Access

Denmark's National Strategy for Open Access

Open Access is a question of achieving the maximum effect from research.

There are many benefits for Danish companies, Danish research and Danish society in having free accessibility – Open Access – to research. With everyone having increased accessibility to online scientific articles, we will see more effective knowledge-sharing between researchers, research institutions, and companies.

<https://ufm.dk/en/research-and-innovation/cooperation-between-research-and-innovation/open-access/Publications/denmarks-national-strategy-for-open-access/national-strategy-for-open-access-english.pdf>

The first strategy was published by the Ministry in 2014, in June 2018, a revised strategy was published with:

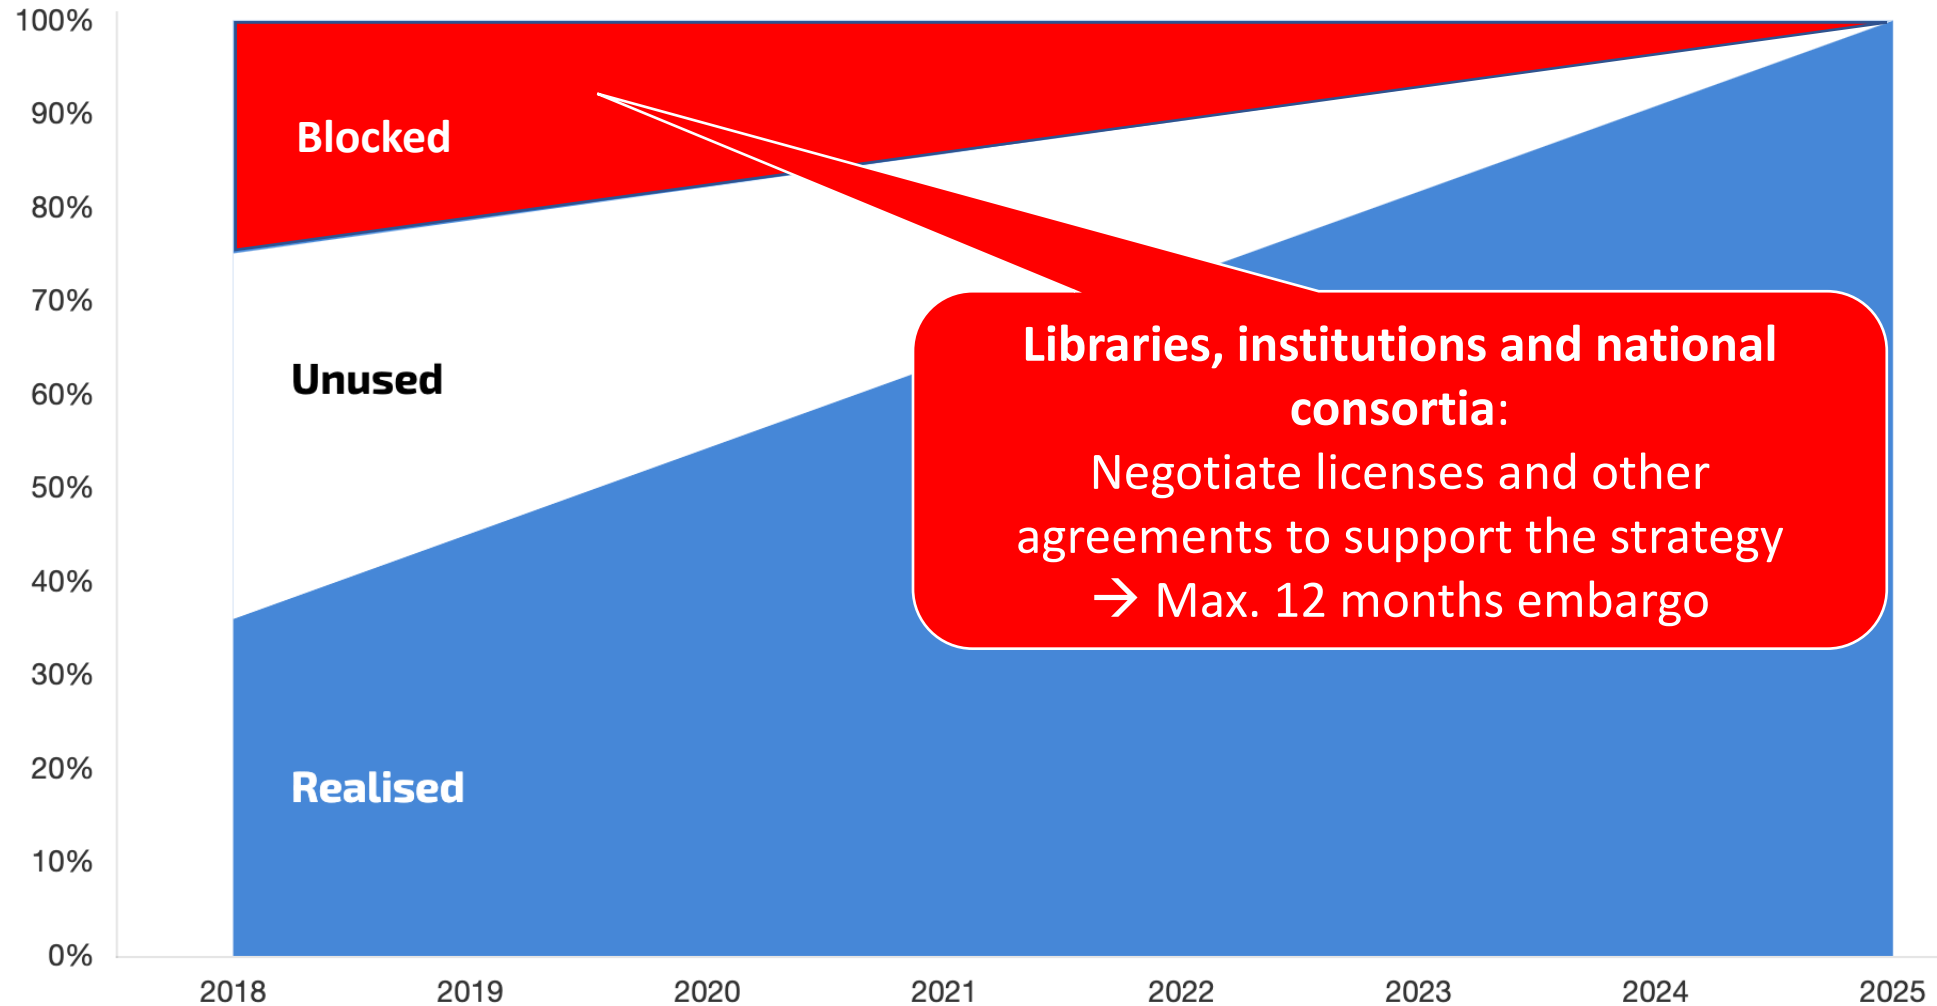

- Revised target
 - **100% OA in 2025**
With a maximum delay of 12 months
- Clearer definition and division of responsibilities
 - **Libraries, institutions and national consortia:**
Negotiate licenses and other agreements to support the strategy
→ Max. 12 months embargo
 - **Researchers and their institutions:**
Fully exploit these established rights and potentials
 - **Research institutions, funders and ministry/authorities:**
Monitor and stimulate the implementation of the strategy

Counted as green

HOME OVERVIEW OA-TYPES DATA GUIDES FAQ

Current guides for Danish universities

The Danish Open Access Indicator aims at providing transparency in regards to processes, data foundation, criterias etc. This page compiles information, important dates and user guides considered relevant for the Open Access implementors at the Danish universities.

- [The annual production cycle](#)
- [Using external repositories](#)
- [Journals with long embargo periods](#)

The annual production cycle

The annual launch of the Open Access percentage in Denmark is the result of a year long process including testruns, hearing periods with the involvement of universities, adjustments etc. A visual overview of the [annual production cycle](#) is available online.

Using external repositories

The Open Access Indicator measures Open Access from both local and other recognized Open Access repositories. An authority list of recognized external repositories is updated yearly, based on input from the Danish universities. During a hearing period, the universities may suggest new repositories to be added to the list.

The current authority list, the criteria for inclusion, and a guide to correct linking explained in this [guide](#).

Journals with long embargoes

In order to establish which journals have embargoes above the 12 months allowed in the National Open Access strategy, an authority list is gathered on a yearly basis. Embargolists from the largest publishers are collected and during a hearing period, the universities are asked to add to the list additional journals with embargoes exceeding the allowed 12 months. Articles published in any of these journals are classified as *blocked Open Access* in the Open Access Indicator.

The current [list of journals with long embargoes](#) used for the Open Access Indicator 2020 calculation is available for download

Updated May 28th 2020

Guide – The Open Access Indicator’s authority list of recognized external repositories

Introduction

The authority list, which serves as support for the universities reporting to the OA Indicator and the indicator’s validation of links, is attached as Appendix 1. The list is the result of several annual hearings, where the universities are invited to suggest new repositories to be added to the list. The suggested repositories are evaluated in accordance with six criteria described further below.

Open Access types and measures

The OA Indicator measures three types of Open Access:

- (1) Full texts, publicly available from local repositories (Green OA)
- (2) **Full texts, publicly available from other recognized external repositories (Green OA)**
- (3) Full texts, published in and available from dedicated Open Access journals (Golden OA)

For type (2), a link that leads directly to the full text is required.

In Appendix 1 examples on how to link correctly to the full texts in the recognized external repositories are presented.

 544 KB

Kære forskningsregistreringsansvarlige,

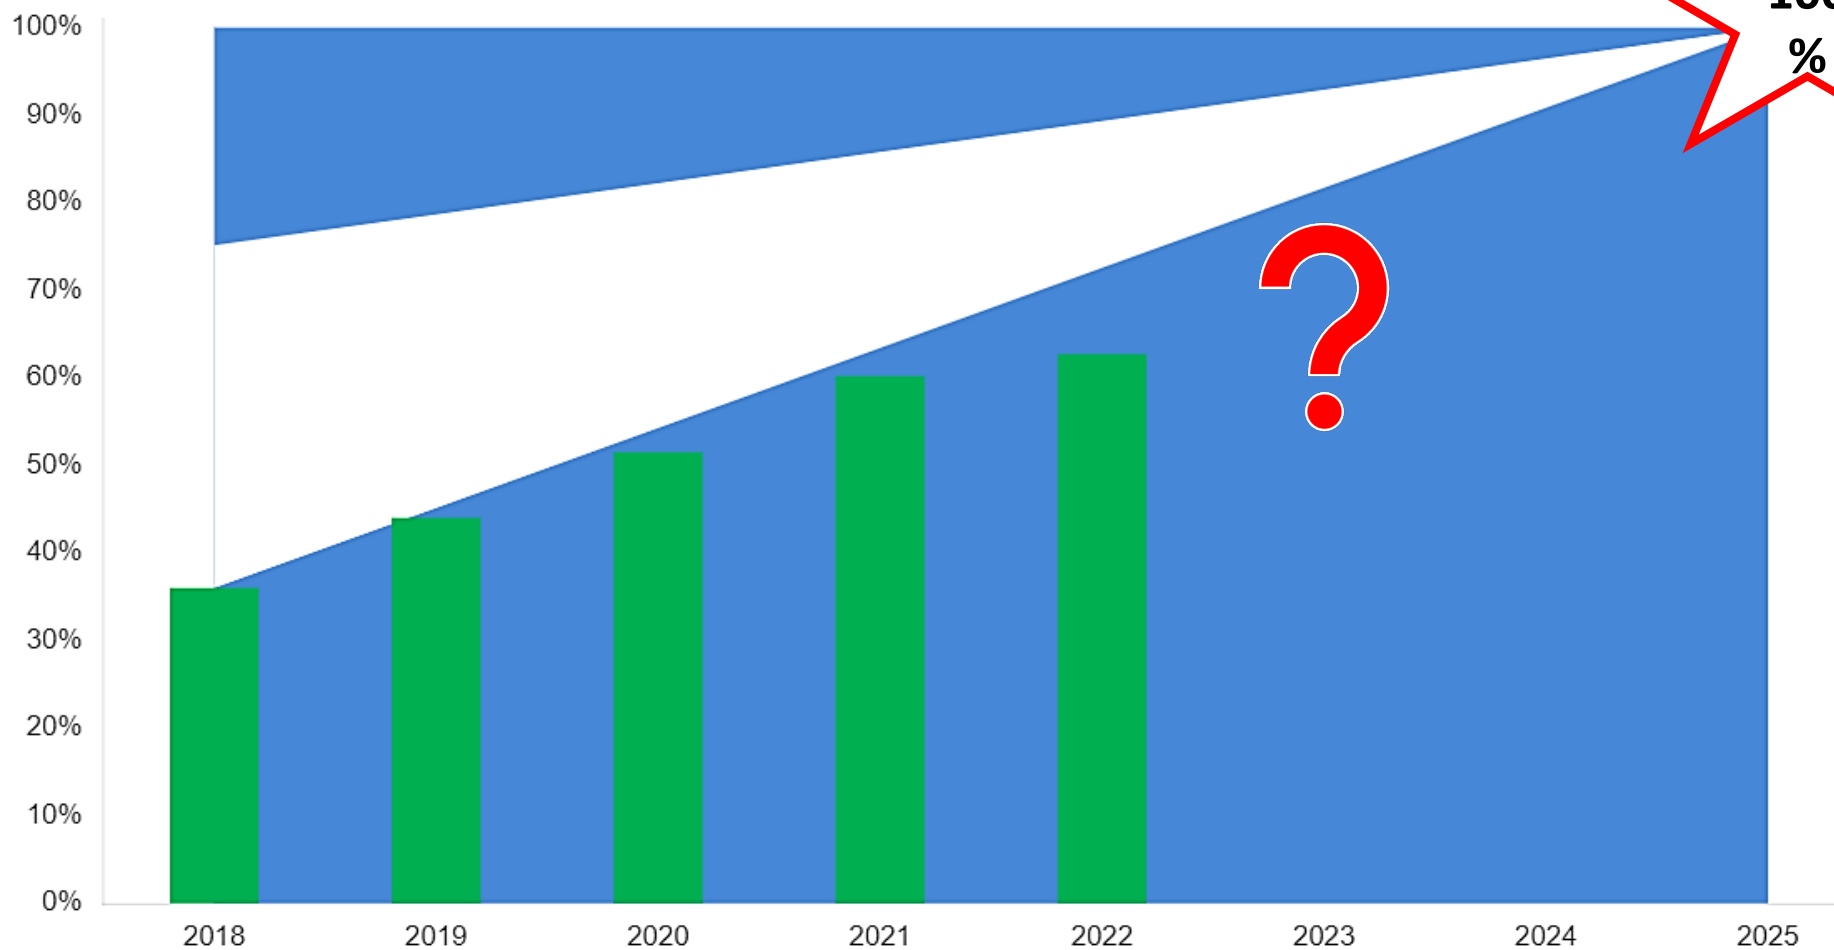

Det er nu tid til at opdatere autoritetslisten over tidsskrifter med lange embargoer for 2018 kategorien; *uudnyttet (gul) til blokeret (rød)* hvis tidsskrifterne har embargoer på mere end 12 måneder.

Til orientering blev der i OA Indikatoren for 2017 data / 2019 kørsel noteret at 2018 publikationer med lange embargoer derfor blev OA realiseret og derfor inkluderede i beregningen.

 Realised  Explanation

Show: Details 2015-2017

Mission of the strategy evaluation – just started

- Identify needs to adjust approaches and tools to achieve 100 % Open Access in 2025

Elements of the evaluation

- Review international developments and experiences
- Review the Danish developments and the impact of the ‘new’ Plan S and ‘transformative’ publisher agreements
- Review the overall publication costs 2018-2022
 - Licenses and subscriptions
 - Ad-hoc acquisition of publications (document delivery etc.)
 - Gold APCs & Hybrid APCs
- Collect feedback via questionnaires
 - From Danish researchers
 - From university leadership and libraries

Global, national and local data Aligned and linked
